

eEquip! Enterprise Asset Management Software

What is the eEquip! Enterprise Asset Management Software

1. Operational platform to manage the physical, financial, and contractual information of physical and IT assets throughout their life cycle.

2. As an operational platform, the eEquip! software can be connected to other systems to sync data, such as fixed asset management software, purchasing software, IT service management tools, and network discovery tools.

Key pain points to solve

1. Lack of visibility to updated information about physical and IT assets: what, where, who has them, in what condition (e.g. retired v.s. active).

2. Time and resources wasted in locating assets, generating reports to oversight organizations.

3. Failure in meeting internal equipment management requirements, specific regulations from federal and state government, such as CFR, FAR/DFARS, Uniform Guidance.

Target markets for the eEquip! Enterprise Asset Management Software

1. Enterprise companies that want to manage physical assets efficiently – track their location, condition and accountability.

2. Government Contractors – subject to FAR 254.24.1 and DFARS requirements on managing Government Property.

3. Recipients of federal grants (>\$500k/annual): subject to CFR requirements on equipment management, including emergency management agencies, nonprofit research organizations, charter schools, Head Start program administrators.

4. IT departments in mid to large sized businesses (>500 employees) and state and local government agencies and county school systems.

Trust. Integrity. Performance.
